Real Estate Sales

Presented by: Khushi Yadav

Objectives

The dataset consists of lists of unique objects of popular portals for the sale of real estate in Russia. More than 310000 objects.

The Russian real estate market has a relatively short history. In the Soviet era, all properties were state-owned; people only had the right to use them with apartments allocated based on one's place of work. As a result, options for moving were fairly limited.

We want to analyze sales data according to date and check out the highest sales data in each month and the growth rate of sales data.

Tasks

1. Formatted data
2. Monthly sales data
3. Monthly sales chart view
4. Total new building in each month
5. Sales analysis according to rooms
6. Highest sales in each month
7. Total sales in each month
8. Growth Rate

Solution

- Convert currency for our analysis and make the data in table form so we can analysis it.
- Check out all the sales, no of sales in each day or month.
- Pivot chart between sales data and date with slicers.
- Total sales in each month and which have highest one.
- Found Growth rate by formula and make a chart.

Methodology

Formatted Data

- Converted the currency from rubles to rupee.
- Analyzed the data by table filter.

Monthly Sales Data

- Made a different tables for sales of each month.
- Made a chart of all tables.

Sales analyze with specification

- Made a pivot chart with slicers

Methodology

Highest sales

- Checked out the highest sales in each month with date.
- find out which month have a highest sales

Growth Rate

- Find out the growth rate on each month.

Total Sales

- Bar chart for total sales in each month.

Goals

Monthly Sales Data-

- Made a different tables for sales of each month by using pivot table and date filter
- Made a chart of all tables.

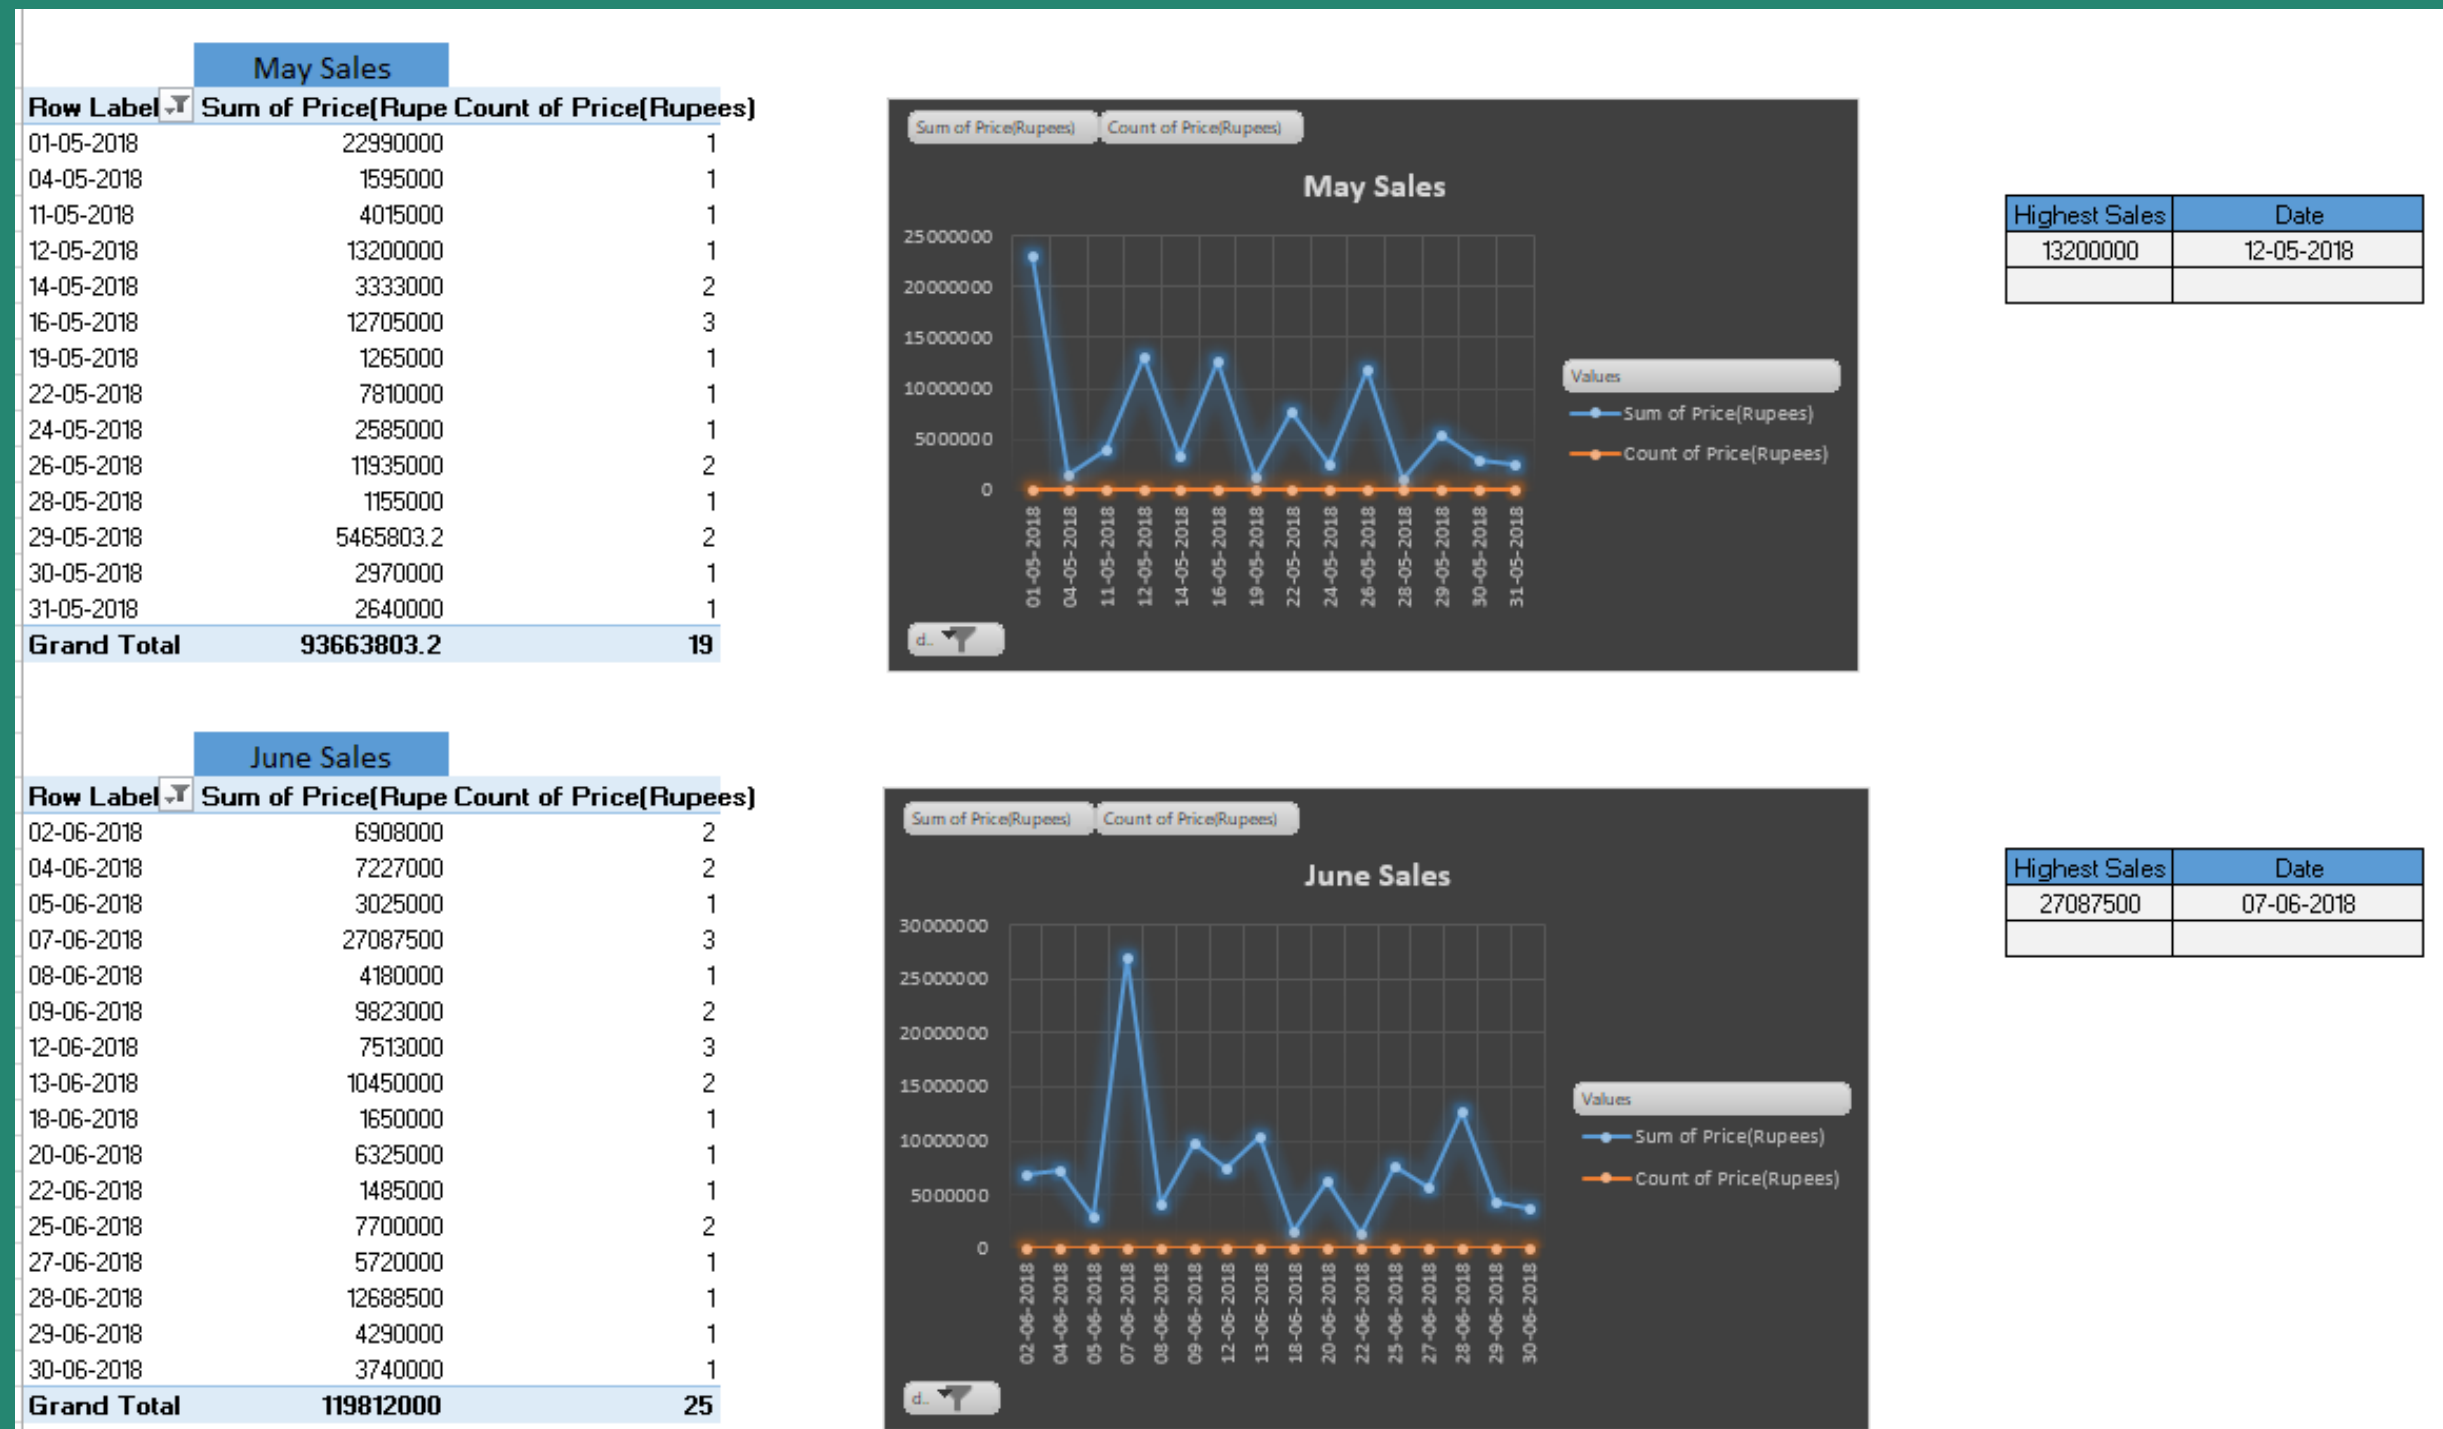

Goals

[Back to Agenda](#)

Sales analyze with specification

- Made a pivot chart with slicers of rooms and building type.
- Graph between date and sales price.

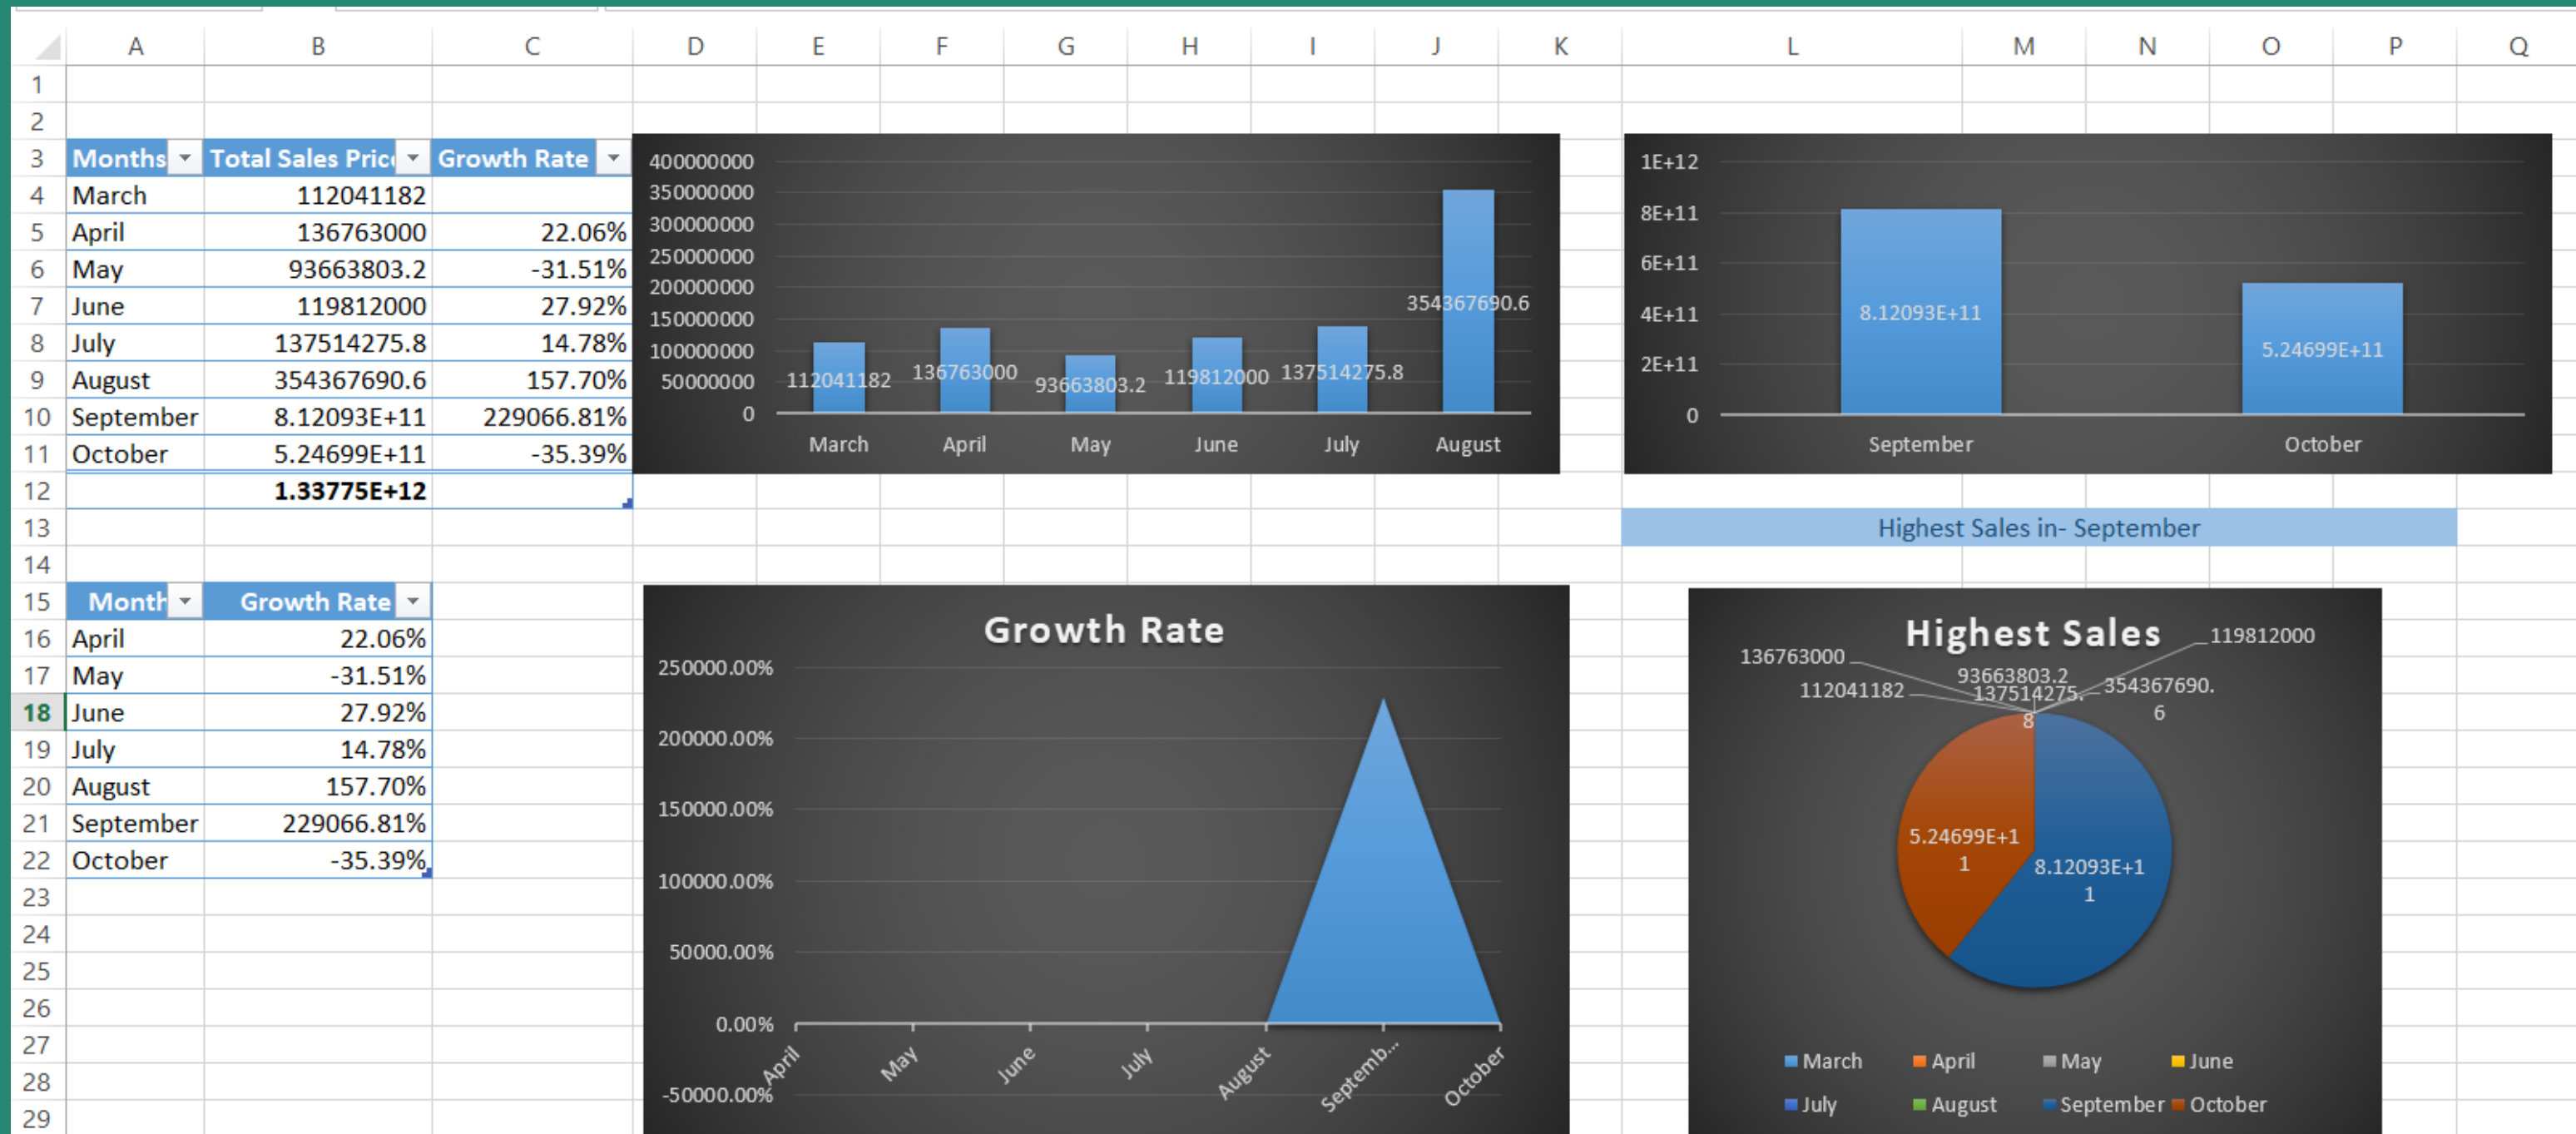

Goals

[Back to Agenda](#)

Highest sales and Growth Rate

- Checked out the highest sales in each month with date.
- find out which month have a highest sales
- Find out growth rate of each month.

Concept Used

Formatted data

- Table format
- Filter data
- currency conversion formula

Monthly Sales

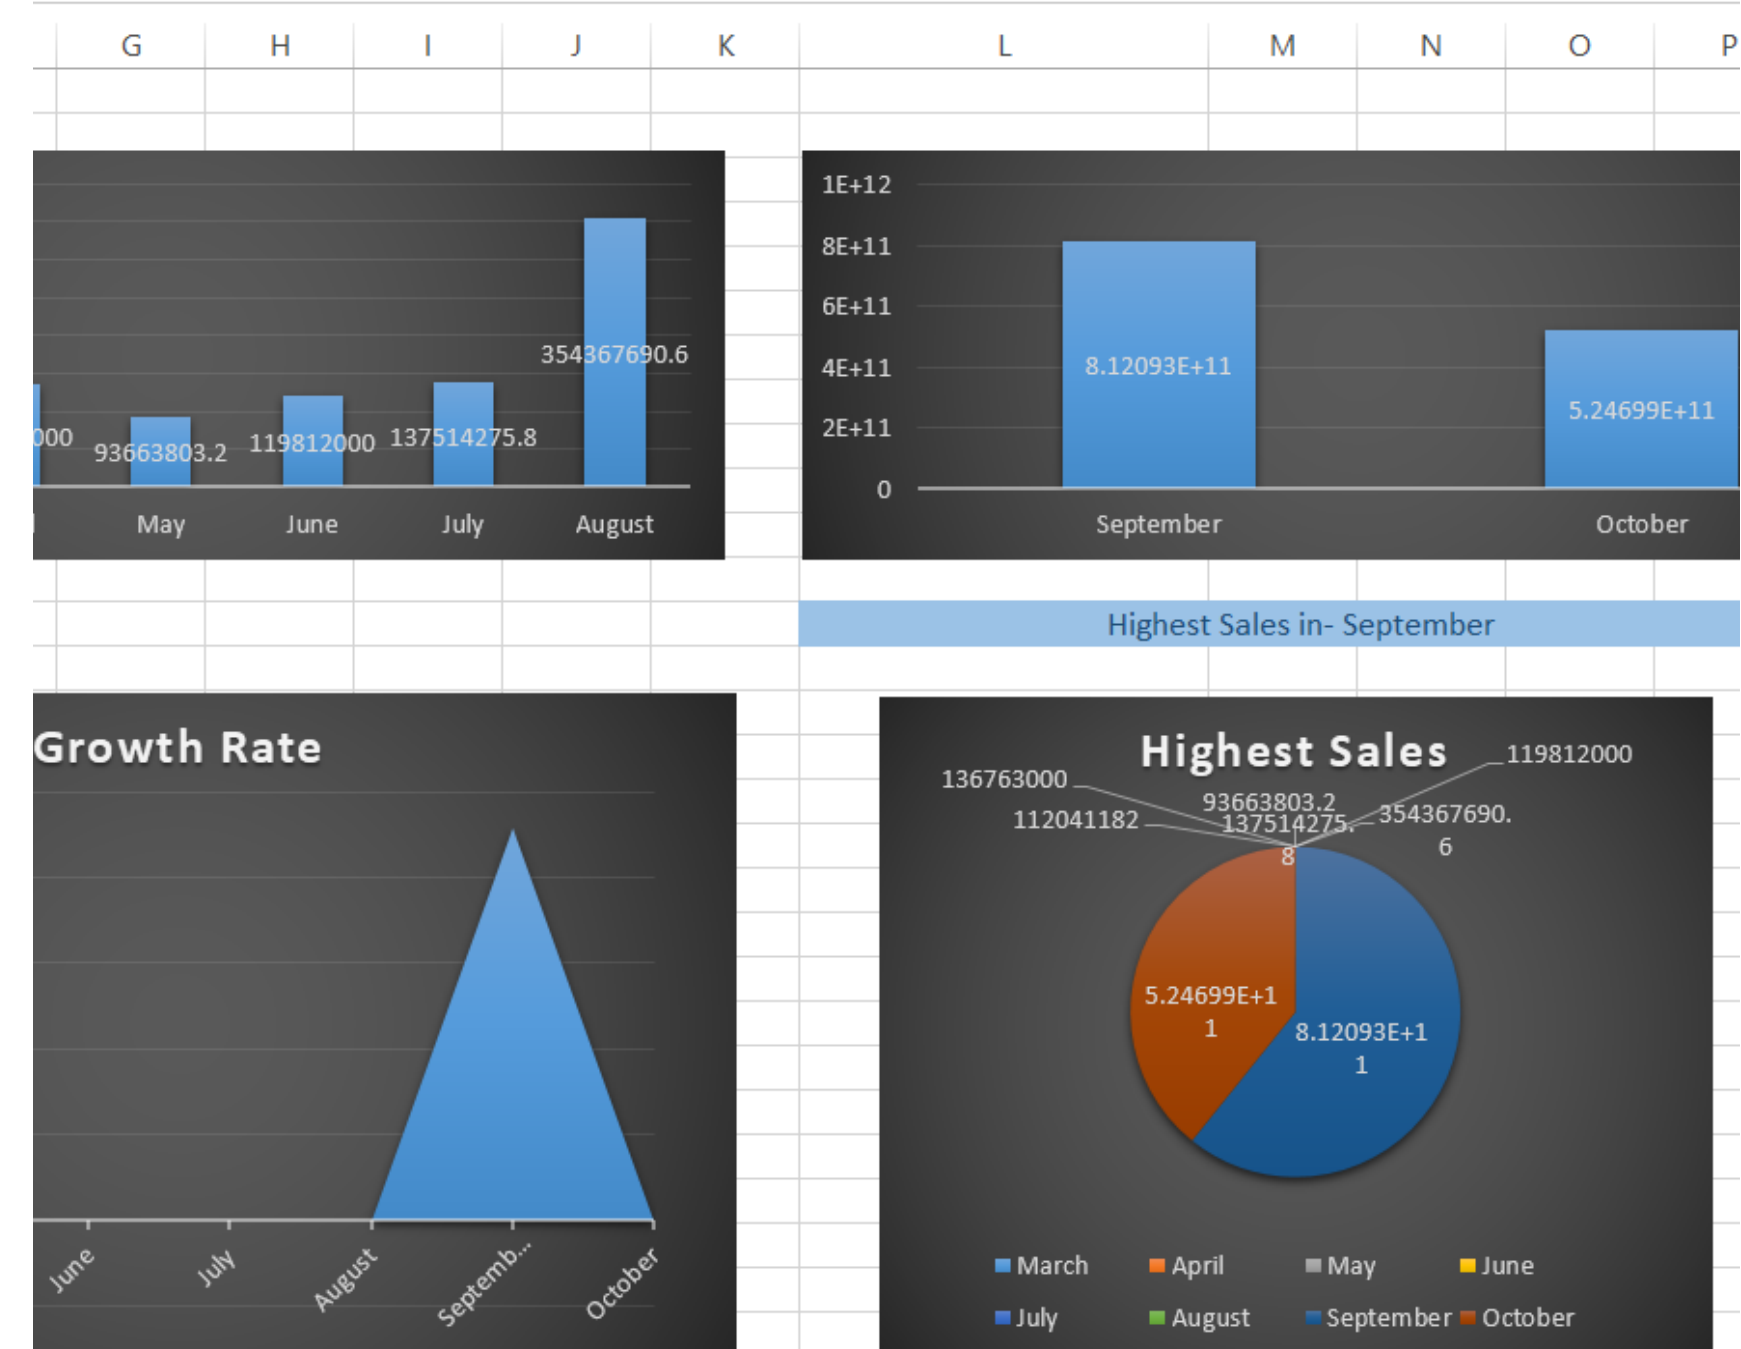

- Pivot table
- Date advance filter
- customize chart
- Pivot chart with slicer.

Total Sales and Growth Rate

- Pivot table
 - chart
 - Growth rate formula
- $$=(\text{present} / \text{past}) - 1$$
- Growth rate chart

Conclusion

- September month has highest sales.
- Total 21696 property sale with total price-1.5155E+11 on 18/09/2018 which was highest.
- Analyzed total sales of each month.
